Simplicity for Science

2022-2023

About Us

Atom Scientific is a specialised manufacturer of diagnostic reagents with over 50 years in delivering exceptional quality to the life science industry throughout the world

Vision

Building blocks for life.

We are on a journey to reach our full potential, while being our customers' best friend and partner, by delivering a full spectrum of chemicals, simply and without bureaucracy.

Mission

Simplicity for Science.

We are doing everything in-house, to make it very simple to source your chemicals from a specialist company, in a trustworthy and reliable way.

Values

Caring

We are a friendly bunch of people. We care about our colleagues, creating a diverse and inclusive working environment.

Entrepreneurial

We make things happen and never give in, finding solutions for our customers. If there is an issue we will sort it. We accept that change is constant, so we are flexible and open to change.

Giving

Business can be a force for good. We make time to say thanks. We believe in giving back. We are giving our people the opportunity to step up.

All orders must include Delivery and Invoice Address and product information as follows:

- Product Code
- Product Name
- Pack Size
- Qty
- Price

All prices on website or in price lists are quoted ex-works on an E,O&E basis.

Technical

Atom provide a Technical Resource on our website, where the following can be downloaded:

- Material Safety Data Sheet (MSDS)
- Certificate of Conformity
- Certificate of Analysis
- Product Protocols

If we hold a Technical email address for you, a full MSDS will be emailed automatically at point of despatch.

Our Scores

With the ongoing introduction of ISO15189, in 2017 Atom Scientific made the decision to undertake a full quality review of all of our Special Stain Kits to ensure we were able to offer our customers pre-validated products to facilitate their ISO15189 compliance. Since 2018, we have participated in the UK NEQAS CPT (Cellular Pathology Technique) scheme as an independent validation of our in-house lab testing results.

A bit about UK NEQAS CPT... UK NEQAS CPT delivers a standardised UKAS accredited programme, providing participants with a proficiency testing method for evaluating laboratory practice to guide and ensure best practice and gold standard results. Using validated material of consistent quality for a range of challenges, participants can demonstrate their quality and performance to maintain high standards of laboratory practice.

As part of each UK NEQAS CPT assessment, run scores are audited to provide an in-depth feedback to aid in continual improvements within organisations, provide expert help identifying problems and provide access to troubleshooting expertise. Scores range from 0-10 and are based on a number of criteria.

UK NEQAS CPT describes a score of 9 or 10 to show excellent appropriate demonstration of the expected staining results, and a high level of quality.

Atom Scientific are proud to publish the scores their kits have achieved.

Certified for Diagnostics

Atom Scientific has a pro-active commitment to offering our customers market leading high quality validated products compliant to all relevant UK and Global Standards.

As you may be aware in May 2022 the IVD regulations were replaced with the new IVDR regulations, and since May 2022 Atom Scientifics products are fully IVDR complaint.

In addition to IVDR, all products remain CE marked in our global markets, however post-brexit the UK has adopted the UKCA mark to replace the CE mark, which all of our products are compliant with.

The IVDR regulations **require** any product that is used in a Medical or Diagnostic application to be registered under IVDR.

The ultimate aim of this change is to increase quality and consistency of diagnostic products as well as ensuring full traceability through the supply chain for all components.

It is important to note that any product not registered under IVDR should only be used in research applications, and should not be used in diagnostic applications as recommended by UKAS.

Atom Scientific is one of the few companies that has achieved IVDR compliance, alongside upgrading our Quality Management System to be ISO13485 compliant.

So to conclude I am really pleased to introduce you to our range of Special Stains & Stain Kits offering you pre-validated, Certified for Diagnostic Use and supported by my dedicated Technical Support Team.

Alcian Blue PAS

Product Code: RRSK6

This stain kit is used for the staining of sulphated and carboxylated acid mucopolysaccharides, and for carbohydrate radicles (e.g. glycogen). The alcian blue and PAS technique combines to differentiate neutral mucins from acidic mucins. It is used as a broad spectrum stain for mucins, a lack of staining with the combined PAS stage indicates the substance is not mucin

Alcian Blue pH 2.5

Product Code: RRSK400

This stain kit is a broad spectrum stain for mucins. It demonstrates sialomucins, sulfomucins and proteoglycans. Alcian Blue has been demonstrated to bind and precipitate hyaluronic acid, chondroitin sulphate and heparin from an aqueous solution, but does not precipitate glycogen hence is glycogen negative unlike PAS which is positive

Congo Red (Highman)

Product Code: RRSK10

This stain kit is used for the detection of Amyloid Protein in tissue sections. The use of alkaline alcoholic solvents has the effect of supressing staining of other tissue components whilst enhancing hydrogen bonding hence improving selectivity for amyloid. This method has stable solutions and has a high degree of selectivity

Congo Red (Puchtler & Sweat)

Product Code: RRSK9

This stain kit is used for the detection of Amyloid Protein in tissue sections. This method removes the need for a differentiation step with the use of a highly concentrated sodium chloride solution which reduces background staining whilst enhancing hydrogen bonding of Congo Red to Amyloid resulting in a progressive staining and highly selective technique

Mucicarmine Southgate

Product Code: RRSK13

This stain kit is used for the demonstration of acid mucins. The active dye molecule is aluminium carminic acid complex known as carmine (Lillie 1977). The exact mechanism is not fully understood but it is believed that aluminium salts form a chelate complex with carminic acid which confers an overall positive charge on the carmine complex attracting sialomucins and sulfomucins and thus staining them whilst neutral mucins do not stain

Oil Red O

Product Code: RRSK14

This stain kit is used to demonstrate hydrophobic lipids especially neutral fats in tissue. In order to penetrate the fats the dye must be dissolved in organic solvents, the solvent must be sufficiently dilute (aqueous) to avoid extracting the lipids into the solution. The most widely used solvent is isopropyl alcohol (isopropanol/IPA). Also, the tissue once stained, can be shown by polarised light to demonstrate birefringent cholesterol

Perls

Product Code: RRSK16

This stain kit is used to demonstrate ferric salts in tissue sections. Treatment with an acid ferrocyanide solution will result in the unmasking of ferric iron in the form of hydroxide, Fe(OH)3, by dilute hydrochloric acid. The ferric iron then reacts with a dilute potassium ferocyanide solution to produce an insoluble blue compound, ferric ferrocyanide (Prussian Blue)

Weigerts Haematoxylin/Van Gieson

Product Code: RRSK22

This stain kit is used for the demonstration of collagen fibres. Van Gieson’s method is a mixture of two anionic dyes which impart one colour to collagen and another to cytoplasm including muscle fibres and erythrocytes. By using an iron haematoxylin (Weigert’s) which is an acid resitant nuclear stain, the Van Gieson counterstain produces the differential staining of the collagen and cytoplasm

ZN (Malachite Green)

Product Code: RRSK23

This stain kit is used for the staining of Mycobacterium tuberculosis and other acid fast organisms. The cell walls of Mycobacteria are not readily penetrated so in order to stain Mycobacteria the basic fuchsin is mixed with phenol to make a powerful stain. Heat can be applied to "force" the stain into the bacillus. Once stained the bacillus is very resistant to decolourisation retaining the stain even when the rest of the preparation has been decolourised

Other products in our range

HPLC Solvents

A wide range of HPLC Solvent Grades including DNA, HPLC, LC-MS and Peptide Synthesis.

Reagents

A highly accurate and precisely manufactured range of Volumetric Solutions, Buffer Solutions, Calibration Buffers and Conductivity Standards.

Labware

An extensive range of high quality labware products used in many different types of laboratories including Chromatography Vials & Caps, Glassware, Plastic Ware, Ceramics, Filtration and PPE Products suitable for many applications.

Vials & Caps

Easy access to your samples for manual sampling and automatic samplers including Crimp, Snap & Screw caps available in a range of sizes, septa and colours.
